The KAI model line: where it is going

KAIPAL Lite is the first of a line of KAI models from Kohenoor Technologies. This page says what is available today and what is planned after it.

It is a statement of direction. It gives no dates and makes no promise of them. Plans change as each model is built and tested, and a model is released only when it has passed our own tests.

The line at a glance

Name	Versions	What it is	What it needs	Cost
KAIPAL Lite (KAI Pocket Assistant Lite)	1, 1.1, 1.2	A miniature of KAI for day-to-day business and finance advice	No graphics card	Free
KAIPA (KAI Pocket Assistant)	1.13, 1.14, 1.15	A wider scope, and it reads pictures and hears recordings	A graphics card of 8 to 12 GB	Free
KAIS (KAI Spirit)	1.16 to 1.19	The essence of full KAI: more of its advisory roles, and light workflows	A graphics card of 12 to 24 GB	Paid
Super KAI	2 and upwards	Full KAI, growing with skills, tools and the workflows of KENOS	Nothing of your own: it is used online through Kohenoor's service	Paid

Free up to KAIPA, paid from KAIS. Every version of KAIPAL Lite and of KAIPA is free. KAIS and everything above it are paid.

How to reach KAI

There are two ways, and they are for different needs.

Online, from anywhere in the world: www.kohenoor.net. KAI is live there today. Open https://www.kohenoor.net in a browser, on any device, in any country. There is nothing to install.

On your own machine: the pocket models. KAIPAL Lite is released for you to download and run offline, in private, as this repository describes, and it is free. KAIPA will be free as well. KAIS is a paid model: how it is supplied will be stated when it is released.

KAI and Super KAI are proprietary

KAI, and Super KAI after it, are proprietary products of Kohenoor Technologies. They are not released as files. They run on Kohenoor's own service.

- **By paid subscription,** for people and businesses who use KAI directly. This is how KAI is reached today.
- **By API, in future,** for businesses and developers who build KAI into their own products and work. The API is planned and is not open yet.

The plans, the prices and what is available today are set out at https://www.kohenoor.net. For questions, write to info@kohenoor.tech.

Apps to follow

Web, Android and iOS apps are to follow, so that KAI is the same on every device a person uses and moving between them is seamless. They will be announced on www.kohenoor.net as each is ready.

KAIPAL Lite: no graphics card needed

Lite is built to run on the machine you already have, offline and in private.

Version	Made for	Status
1	Small machines and mobiles	Available now
1.1	Top-tier mobiles and standard business machines	In preparation
1.2	Modern mid-range computers	Planned

Version 1 is the release in this repository: about 2 billion active parameters, about 4 GB of memory, text only. It advises on pricing, cash, customers, suppliers and everyday business writing, and it works a sum out line by line.

KAIPA: a wider scope, with sight and hearing

KAIPA is KAI Pocket Assistant without the "Lite". It is planned for businesses and individuals who need more depth than Lite gives and have a machine with a graphics card. It is planned to read a picture, such as a photo of an invoice or a price list, and to hear a short recording, as well as to read text.

KAIS: the essence of full KAI

KAIS, KAI Spirit, is planned to carry more of the advisory roles of full KAI in one model, and to take on light workflows: work of several steps and not one answer to one question. It is the first paid model of the line.

Super KAI

Super KAI is version 2. It is planned as full KAI, and to grow from version 2.1 onwards with skills, tools and the workflows of KENOS, the Kohenoor operating environment and its apps. It will work under human supervision: the decisions that matter stay with a person. Super KAI is proprietary and is reached through Kohenoor's service: by paid subscription, and by API once that opens.

What does not change from one model to the next

- **It advises; it does not decide for you.** No model in this line tells you what to buy or sell, predicts a price, or recommends borrowing at interest. None gives a legal, tax or medical conclusion: for those it points you to KAI Premium at www.kohenoor.net or to a qualified professional.
- **It does not invent.** A figure, a name or a source it was not given is not made up. When it does not know, it says so.
- **It stays itself.** It is KAI, built by Kohenoor Technologies, however the question is put.
- **It answers in your language.**
- **Human-centred and human-supervised.** KAI is built to serve the person using it, and to leave the judgement with them.

Following the work

News of KAI is published at https://www.kohenoor.net and https://www.kohenoor.tech. New releases of the pocket models are announced in this repository, on Hugging Face at https://huggingface.co/KOHENOOR-AI and on the Ollama registry at https://ollama.com/kohenoor. If you are testing a release, report what you find as an issue here, with the exact question and the exact answer.

KAI, KAIPAL, KAIPA, KAIS, Super KAI and KAI Pocket Assistant are names of Kohenoor Technologies.
