KAIPAL: Bringing Artificial Intelligence to Everyday Devices

28 October 2026

Kohenoor Labs, the research and development division of Kohenoor Technologies, is advancing an initiative to make artificial intelligence accessible to people using ordinary computers and mobile phones, without requiring expensive hardware upgrades.

The KAIPAL Initiative

KAIPAL (Kohenoor Artificial Intelligence – Pocket Assistant Lite) is a developing series of lightweight, subject-specific and audience-centered AI models, engineered through fine-tuning of open-weight language models ranging from **2 billion to 5 billion parameters**.

Unlike general-purpose AI systems, KAIPAL models are designed to perform defined tasks for specific audiences, including students, educators, professionals, business owners, and everyday users.

Our objective is straightforward: **deliver useful, specialized AI intelligence on the devices people already own.**

Nine Months of Research and Testing

Beginning **February 11, 2026**, Kohenoor Labs initiated an extensive experimental program involving model evaluation, fine-tuning, quantization, behavioral alignment, and CPU-based inference.

After nearly nine months of research, three experimental KAIPAL models have been successfully developed, tested, and publicly released:

- KAIPAL Lite 1 — Business and financial assistance
- KAIPAL Lite 2 — Educational assistance
- KAIPAL Lite 3 — Children's stories, rhymes, and creative engagement

Designed for Affordable Local AI

The KAIPAL research program targets:

- **Model file sizes between 1GB and 4GB**
- **CPU-only operation, without dedicated GPUs**
- Compatibility with modest and older desktops, laptops, and smartphones
- Offline operation, keeping conversations and processing on the user's device
- Task-specific intelligence optimized for practical usefulness rather than model size alone

Actual speed and memory requirements vary by model and device.

How to Run KAIPAL

Users can download compatible models and run them locally using these recommended applications:

Mobile (Android and iOS): PocketPal AI

Desktop (Windows, Linux, macOS): Ollama

Official model repository: Kohenoor Labs on Hugging Face

Research Continues

Kohenoor Labs continues to investigate how smaller, carefully engineered language models can deliver increasingly capable and reliable subject-specific assistance while keeping their computational and storage requirements minimal.

Our guiding principle: Artificial intelligence should adapt to people's existing devices and not force people to purchase new ones.
